

Seokjae Lee

Software Engineer · Server-Side Development

seokjae.d.lee@gmail.com · github.com/doljae · doljae.tistory.com · linkedin.com/in/doljae

Server-side engineer across fintech, advertising, and robotics. My work has centered on restructuring production systems without taking them down, carrying new services from initial design to launch, and filling in the engineering foundations nobody owned.

TECH STACK

Language Kotlin, Java, Python, Go

Framework Spring Boot, Spring Cloud, JPA, WebFlux

Data MySQL, MongoDB, Redis, Kafka, Airflow

Infra Kubernetes, Docker, Prometheus, Grafana, ELK

EXPERIENCE

NAVER

May 2025 – Present

Software Engineer · Robot Service Platform (NAVER LABS → NAVER)

- Led the next-generation migration from the company-wide platform to a new robot service platform — an API relay layer made the cutover seamless with no client-side work
- Single-handedly built the missing engineering foundation on an in-flight project — linter, CI repair, tracing, metrics dashboard, and a dead test suite revived into 347 cases (3×), 70% faster
- Built deployment pipelines for 7 production environments across 4 countries, and designed p95/p99 monitoring for the 8 clusters they run on
- JDK 25 and Spring Boot 3.x → 4.x migration; cut app startup from 43s to 4.6s with an AOT cache and build time by 60% with Spring layered images and GitHub Actions caching
- Converted a single-instance design to a scale-out architecture
- Introduced PR-Agent; built the shared project config for the team's AI coding tools (Cursor, then Claude Code) — review time –40%, writing –30%, bug detection +20%
- Drove migration of an in-house i18n solution to the company-wide one; built an Agent Skill for weekly work summaries
- Two overseas trips to build a new site and validate the cutover against physical robots, in English with local teams

NAVER

Jan 2024 – Apr 2025

Software Engineer · NAVER Dynamic Ads (NDA) Server

- Designed and built a shared module streaming ad-creation data from MongoDB to Redis in real time via CDC
- Moved complex MongoDB aggregations into application logic, improving read query memory and speed by up to 90%
- Automated load testing in CI with nGrinder and GitHub Actions; built a multi-cluster monitoring dashboard
- JDK 17 and Spring Boot 2.x → 3.2 for internal admin tooling; an internal API proxy on Java Virtual Threads

LINE

Jun 2021 – Jan 2024

Software Engineer · LINE BK Channel Server, Thailand — 6M+ users during my tenure

- One of three founding engineers on a new insurance brokerage service, from initial architecture to launch — domain and enrollment state machine design, KYC and other core features
- Developed and operated the loan enrollment process for the lending part; raised test coverage from 63% to 86%
- Reconciled loan transactions left inconsistent by API timeouts and network faults, up to 200 at a time — Kafka replay for automated recovery, manual reconciliation where the core API blocked it
- Took the insurance API server from Spring Boot 2.x to 3.x and wrote it up for the engineering blog; JDK 17 migration; ELK-based logging on Kubernetes

KT DS

Jan 2021 – May 2021

Software Engineer · Operations, KT international rate settlement system

OPEN SOURCE & SPEAKING

- [Issues and patches to Spring Framework, Spring Boot, Spring AI, Debezium, NAVER Fixture Monkey, Qodo PR-Agent, and more](#)
- Maintainer of [kotlin-logging-extensions](#) — a boilerplate-free logger for Kotlin classes
- KotlinConf Extended Seoul 2026 speaker (upcoming, Aug 2026) — ["Why doesn't Kotlin have @Slf4j? So I built one"](#)
- INFCON 2023 speaker — ["One Week Before a Kotlin+Spring Project: A Junior's Kotlin Adoption Story"](#)
- LY Corporation Tech Blog (formerly LINE Engineering Blog) — ["Spring Boot 3 Migration in Practice"](#)

EDUCATION & CERTIFICATION

Gachon University B.S. in Software Mar 2013 – Aug 2020

SSAFY Samsung Software Academy for Youth Jul 2020 – Dec 2020

Boostcamp NAVER Connect Foundation Jul 2020 – Aug 2020

Certified Kubernetes Administrator Feb 2026

Engineer Information Processing Nov 2019

English working proficiency · Japanese conversational
