Seokjae Lee

Software Engineer · Server-Side Development

seokjae.d.lee@gmail.com · github.com/doljae · doljae.tistory.com · linkedin.com/in/doljae

Server-side engineer across fintech, advertising, and robotics. My work has centered on restructuring systems already running in production, carrying new services from initial design to launch, and filling in the engineering foundations nobody owned.

TECH STACK

Language Kotlin, Java, Python, Go
Framework Spring Boot, Spring Cloud, JPA
Data MySQL, MongoDB, Redis, Kafka, Airflow
Infra Kubernetes, Docker, Prometheus, Grafana, ELK

EXPERIENCE

NAVER

Jan 2024 – Present

Software Engineer · Robot Service Platform dev & ops, i18n solution ops (Dec 2025–) (NAVER LABS → NAVER) May 2025 – Present

- Converted a single-instance design to a scale-out architecture on a clustered Quartz JDBC JobStore, one node per firing; built deployment pipelines for the production environments in 4 countries and p95/p99 monitoring for the 6 clusters they run on
- JDK 25 and Spring Boot 3.x → 4.x migration, completed ahead of the official launch and shipped in Feb 2026; cut app startup from 43s to 4.6s with an AOT cache and build time by 60% with Spring layered images and GitHub Actions caching
- Single-handedly built the missing engineering foundation on an in-flight project — ktlint, CI repair, distributed tracing, metrics dashboard, and a dead test suite revived into 347 cases (3×), 70% faster
- Introduced PR-Agent; built and maintained the shared project config for the team's AI coding tools (Cursor, then Claude Code), and applied MCP for tool integration. Published repeated work as Agent Skills on the internal hub, one of them letting non-engineers drive our static page hosting in plain language
- Overseas trips, in English: built out robot delivery in Saudi Arabia and defined its service configuration and operational verification flow; verified the platform transition on physical robots with NAVER LABS Europe (France)

Software Engineer · NAVER Dynamic Ads (NDA) Server — Jan 2024 – Apr 2025

- Owned serving data for a retargeting ad product — shared module streaming millions of documents from MongoDB to Redis via CDC
- Moved complex MongoDB aggregations into application logic, improving read query memory and speed by up to 90%; heap dumps traced a verification-test OOM to its cause (653MB → 27MB for a single result)
- Automated load testing in CI with nGrinder and GitHub Actions; built a multi-cluster monitoring dashboard
- JDK 21 and Spring Boot 2.x → 3.2 for internal admin tooling; an internal API proxy on Java Virtual Threads

LINE

Jun 2021 – Jan 2024

Software Engineer · LINE BK Channel Server, Thailand — 6M+ users during my tenure

- One of three founding engineers on a new insurance brokerage service, from initial architecture to launch — domain and enrollment state machine design, KYC and other core features
- Developed and operated the loan enrollment process for the lending part; raised test coverage from 63% to 86%
- Reconciled loan transactions left inconsistent by API timeouts and network faults, up to 200 at a time — Kafka replay for automated recovery, manual reconciliation where the core API blocked it
- Took the insurance API server from Spring Boot 2.x to 3.x and wrote it up for the engineering blog; JDK 17 migration; ELK-based logging on Kubernetes

KT DS

Jan 2021 – May 2021

Software Engineer · Operations, KT international interconnection settlement system

OPEN SOURCE & SPEAKING

- Redis cluster-mode sink support in **Debezium** DBZ-9226 : replaced the single-mode-only Jedis client
- **Spring Framework** @RequestParam collection handling 6.2.0-M7 · **Spring Boot** Customizer override Javadoc 3.4.10
- Maintainer of **kotlin-logging-extensions** — a boilerplate-free logger for Kotlin classes
- KotlinConf Extended South Korea 2026 speaker (Aug 2026) — "Why doesn't Kotlin have @Slf4j? So I built one"
- INFCON 2023 speaker — "One Week Before Joining a Kotlin+Spring Project: A Junior Developer's Kotlin Adoption Story" · slides
- LY Corporation Tech Blog (formerly LINE Engineering Blog) article 2023 — "Spring Boot 3 Migration in Practice"

EDUCATION & CERTIFICATION

Gachon University B.S. in Software Mar 2013 – Aug 2020
Samsung Electronics Samsung Software Academy for Youth (SSAFY) 2020
NAVER Connect Foundation Boostcamp Challenge 2020

Certified Kubernetes Administrator Feb 2026
Engineer Information Processing Nov 2019
English working proficiency · Japanese conversational
